SKILLS

Python, TypeScript, SQL, React, Jupyter Notebooks, Git, AWS (RDS), PostgreSQL, FastAPI, Docker

EXPERIENCE

BizTrip AI **San Francisco, California**

Backend Engineering Intern *Jan 2026 – Aug 2026*

- Built an opt-in feature that rebooks hotel stays at a lower rate when the price drops. A daily job re-prices refundable bookings through Sabre and only rebooks if the free-cancel window is still open, the property is the same, and the savings are big enough. Added an admin dashboard that shows price history for each stay.
- Reduced AWS costs by about $500/month by moving data from AWS to encrypted DuckDB files, and kept the analytics agent working against it.
- Built calendar integrations for the web app. Users can subscribe to an ICS feed that stays in sync when a trip changes or gets cancelled, and connect their Google or Outlook calendar through OAuth.
- Built two flight fare features in the travel agent. It recommends the lowest logical fare and offers it as a cheaper alternative the user can accept or decline. I also added an opt-in "Show all fares" view that goes from one fare per cabin to the full set of branded fares.

BizTrip AI **San Francisco, California**

Data Science Intern *May 2025 – August 2025*

- Utilized Python and SQL to build a custom AI analytics agent enabling clients to query complex travel datasets using natural language.
- Built a Sabre API pipeline that matches a client's hotel lists to Sabre hotel codes by location and name, with match scoring.
- Wrote scripts to clean and normalize a client's historical air, hotel, and car data. They fix cost formatting, expand rates, parse routes and airports, and validate the schema.

EDUCATION

The University of Western Ontario **London, Ontario**

B.S. in Data Science *Jan 2028*

- **Related Coursework:** Software Engineering, Databases, Data Analysis and Visualization, Data Science I-III

WORK AUTHORIZATION

Dual-citizen: USA and Canada
